Figure 1. The effect of the *Salmonella* serotype on the survival of *Salmonella* in the presence of *Trichostema* and *Trichostema* in the presence of *Salmonella*. The figure shows the survival of *Salmonella* in the presence of *Trichostema* and *Trichostema* in the presence of *Salmonella* for different serotypes. The y-axis represents the survival of *Salmonella* in the presence of *Trichostema* and the x-axis represents the survival of *Trichostema* in the presence of *Salmonella*. The legend indicates the serotypes: *Salmonella* (red), *Trichostema* (blue), and *Salmonella* (green). The figure shows that the survival of *Salmonella* in the presence of *Trichostema* is higher for the *Salmonella* serotype than for the *Trichostema* serotype. The survival of *Trichostema* in the presence of *Salmonella* is higher for the *Trichostema* serotype than for the *Salmonella* serotype.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher for the 10 trials condition than for the 5 trials condition. Error bars represent the standard error of the mean.

	Prevalence	Incidence
Chronic disease	High	Low
Acute disease	Low	High
